1. MAC spoofing addresses allowed

Portnox/ Tiger Logic

Authentication should be based on additional parameters other than just MAC thus verifying the device (e.g. AD, SSH, SNMP, TCP Syn and Reset, etc.) - session

Using MAC authentication for Windows machines outside domain (ATMs) and Cisco devices (switches which IP address is not known)

2. Duplicate MAC addresses allowed

Portnox/ Tiger Logic

Configure an appropriate reaction for such event. - session

3. Auto-discovery of ports and new switches not in place

Portnox/ Tiger Logic

Unauthorized hub, Clutter

4. False positives such that legitimate systems are being blocked

Portnox/ Tiger Logic

Legitimate systems should not be blocked and such occurrence should be properly investigated to understand the root cause and amend such behavior.

5. Portnox NAC Reports (change RED colours for reporting)

Portnox/ Tiger Logic

New UI provides additional capabilities including viewing devices and their more detailed status

6. Inability to customize reports

Portnox allows customization of reports. If a specific required is raised which is not within the Vanilla installation please raise it to us and we will address it accordingly. New UI provides additional filtering capabilities

1. Ticket#: 6281 - Cisco C2960 Display (48 ports instead of 24) - pending Vadim availability.
