- **WLC - Since 2016 at beginning of implementation** - Disconnected and clients are not shown. Currently do not see wireless clients.
 - A known bug pending fix.
 - Need to connect and verify solution immediately.
- Email alerts - related to WLC - email of clients of WLC are not authenticated. When connected to Portnox, they seem authenticated. Clients are roaming.
 - Will review and address after WLC integration is resolved.
- Converged ports, randomly, vlan is not identified correctly. This is resolved by re-adding the switch. HP, models will be sent later.
